1. Introduction

The InternConnect: Smart Internship Allocation System is a web application that connects students, companies, and administrators for internship management and allocation.

Students create profiles, upload PDF resumes, receive AI-assisted internship recommendations, apply for internships, and track application/allocation status. Companies publish internships, review applicants, shortlist or reject candidates, and view AI-assisted applicant rankings. Administrators review allocation recommendations and confirm final allocations while respecting available seats.

2. Problem Definition & Scope

2.1 Problem Definition

The **PM Internship Scheme** receives applications from a large number of students for limited internship opportunities across various organizations. Manually evaluating candidate profiles based on skills, academic performance, resumes, preferred locations, and internship requirements is time-consuming, complex, and difficult to perform consistently and fairly.

The proposed system addresses this challenge by using **resume analysis** and a **deterministic scoring algorithm** to evaluate candidate profiles, recommend the most suitable internships, and rank applicants based on predefined criteria. This improves the efficiency, transparency, and accuracy of the internship allocation process while reducing manual effort.

2.2 Goals & Objectives

- Provide role-based access for Student, Company, and Admin.
- Allow students to upload PDF resumes and maintain profiles.
- Analyze resume text using Google Gemini through Spring AI.
- Generate top internship recommendations.
- Prevent duplicate internship applications.
- Allow companies to rank applicants using match scores.
- Provide admin-controlled allocation preview and confirmation.
- Respect internship seat limits.
- Keep AI as decision support; final allocation requires admin confirmation.

2.3 Major Constraints & Outcomes

❖ Constraints:

- Gemini API availability, quota, and valid API key are required.
- Only text-based PDF resumes can be reliably analyzed.
- MySQL database must be running.
- AI output is validated before use.
- The system does not send passwords or JWT tokens to Gemini.

❖ Outcomes:

- Faster internship screening.
- Explainable matching based on skills, CGPA, location, and project/experience relevance.

- Controlled and auditable allocation flow.

3. Software Requirement Specification

3.1 Proposed System

The proposed system uses React for the frontend and Spring Boot for backend REST APIs. JWT is used for authentication. MySQL stores users, profiles, internships, applications, skills, and allocations.

Google Gemini analyzes resume text extracted with Apache PDFBox. The final internship score remains deterministic in Java.

3.2 Functional Requirements

Module	Main Functions
Authentication	Register, login, JWT validation, password change, logout
Student	Profile, skills, resume upload, internships, recommendations, applications
Company	Profile, internship CRUD, applicant list, shortlist/reject, AI ranking
Admin	Dashboard, users, internships, allocation preview, allocation confirmation
AI	Gemini resume analysis, deterministic matching, applicant ranking
Resume	PDF validation, secure upload, restricted viewing
Allocation	Application-only candidate selection, seat-limit enforcement

4. Scope

❖ Included:

- Student, company, and admin roles.
- Internship posting and application workflow.
- AI-based resume extraction and recommendations.
- Company AI applicant ranking.
- Admin allocation preview and confirmation.
- Secure JWT-based API access.

❖ Not included:

- External job-board integrations.

- Cloud object storage.
- Automated final allocation without admin confirmation.

5. System Modules

1. Authentication Module
2. Student Profile Module
3. Company Profile Module
4. Internship Management Module
5. Resume Upload and Processing Module
6. AI Recommendation Module
7. Application Management Module
8. Company Applicant Ranking Module
9. Admin Allocation Module
10. Dashboard and Reporting Module

5.1 Performance, Hardware & Software Requirements

❖ Software:

- Java 17
- Spring Boot
- MySQL 8+
- ReactJS
- Node.js and npm
- Maven
- Google Gemini API key
- Modern browser

❖ Hardware:

- Minimum 4 GB RAM
- Dual-core processor
- 2 GB free storage
- Internet connection for Gemini API

❖ Performance expectations:

- Normal REST responses should complete quickly.
- AI analysis depends on Gemini response time.
- Resume analysis is cached during backend runtime to reduce repeated Gemini calls.
- Allocation respects available seats and does not allocate one student multiple times.

7. Test Cases and Verification Steps

Test ID	Test Case	Steps	Expected Result
TC-01	Student registration	Register with Student role	Student user/profile created
TC-02	Company registration	Register with Company role	Company user/profile created
TC-03	Login	Login with valid credentials	JWT token returned and dashboard opens

TC-04	Unauthorized access	Access another student's profile URL	403 Forbidden
TC-05	Resume validation	Upload JPG, empty PDF, or file over 10 MB	Upload rejected
TC-06	Resume upload	Upload valid text PDF	PDF stored and filename saved
TC-07	AI recommendation	Click Get AI Recommendations	Top ranked internships displayed
TC-08	Duplicate application	Apply twice to same internship	409 Conflict / Already Applied
TC-09	Company ownership	Edit another company's internship	403 Forbidden
TC-10	Applicant ranking	Company opens applicant ranking	Ranked candidate list shown
TC-11	Allocation preview	Admin generates preview	Eligible candidates shown by internship
TC-12	Seat limit	Internship has 2 seats and 4 candidates	Maximum 2 allocations
TC-13	Confirm allocation	Admin confirms preview	Allocation saved and application SELECTED
TC-14	Gemini failure	Remove key or exhaust quota	Readable error and no invalid allocation

Manual Verification Workflow:

1. Start MySQL and use the pm_internship_db database.
2. Configure GEMINI_API_KEY for the backend process.
3. Start the Spring Boot backend.
4. Start the React frontend.
5. Register a company and complete its profile.
6. Create an internship with Java, Spring Boot, MySQL, React, and two seats.
7. Register a student and complete the profile.
8. Upload a text-based PDF resume.

9. Open AI Recommendations and verify ranked recommendations.
10. Apply for an internship.
11. Log in as company, open applications, and generate applicant ranking.
12. Shortlist or reject applicants as required.
13. Log in as admin and generate allocation preview.
14. Verify recommended students, scores, and seat limits.
15. Confirm allocation.
16. Verify application status changes to SELECTED and seats are reduced.

AI Based Internship Allocation System

Find the best internship opportunities using Artificial Intelligence.

[Get Started](#)

Why Choose Us?

AI Recommendation

Smart internship matching using skills, CGPA and location.

Student Portal

Easy internship search and application.

Company Portal

Create and manage internships efficiently.

About Our System

The **AI Based Internship Allocation System** is a smart web application that automates the internship allocation process by matching students with suitable internship opportunities using Artificial Intelligence. The system analyzes student skills, academic performance, preferences, and company requirements to ensure a fair, transparent, and efficient allocation process.

AI Recommendation

Intelligent internship recommendations based on skills, CGPA, location, and interests.

For Students

Apply for internships, upload resumes, and track application status in one place.

For Companies

Post internships, shortlist suitable candidates, and manage applications easily.

For Admin

Monitor the complete internship allocation process with transparency and accuracy.

Frequently Asked Questions

Who can apply for internships?

Any registered student with a completed profile can apply.

How are internships recommended?

The AI compares student skills, CGPA and location with internship requirements.

Can I update my resume?

Yes. Students can upload a new resume anytime.

InterConnect

AI Internship Allocation System helps students discover suitable internships using Artificial Intelligence while enabling companies and administrators to efficiently manage the internship allocation process.
